PM25CGB120

FLAT-BASE TYPE INSULATED PACKAGE

Prepared by		H.Murakami, M.Joko, R.Yoneyama
	Α	T.Marumo, T.Ogawa, T.Shimizu
Approved by		H. Takemoto
(Date)		8 th -Oct. 2015

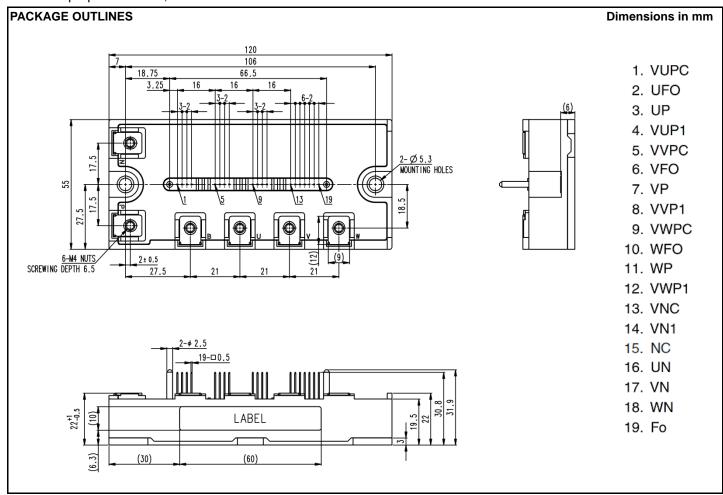

FEATURE

- a) Adopting Full-Gate CSTBT[™] chip.
- b) The over-temperature protection which detects the chip surface temperature of $\mathsf{CSTBT}^\mathsf{TM}$ is adopted.
- c) Error output signal is possible from all each protection upper and lower arm of IPM.

APPLICATION

General purpose inverter, servo drives and other motor controls

t _{dead}	Dead Time	For IPM's each input signals (Fig.7)	≥ 2.5	μs

This product is compliant with the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment (RoHS) directive 2011/65/EU.

Note3. With ripple satisfying the following conditions: dv/dt swing $\leq \pm 5$ V/ μ s, Variation ≤ 2 V peak to peak

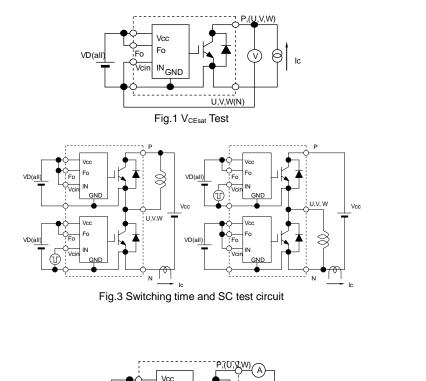

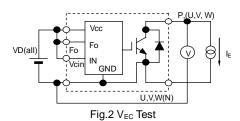

PRECAUTIONS FOR TESTING

- 1. Before applying any control supply voltage (V_D), the input terminals should be pulled up by resistors, etc. to their corresponding supply voltage and each input signal should be kept off state.
 - After this, the specified ON and OFF level setting for each input signal should be done.
- 2. When performing "SC" tests, the turn-off surge voltage spike at the corresponding protection operation should not be allowed to rise above V_{CES} rating of the device.

(These test should not be done by using a curve tracer or its equivalent.)

HIGH POWER SWITCHING USE INSULATED TYPE

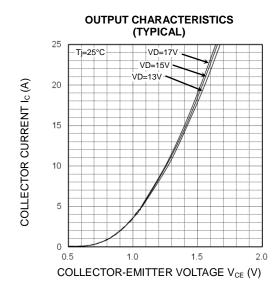

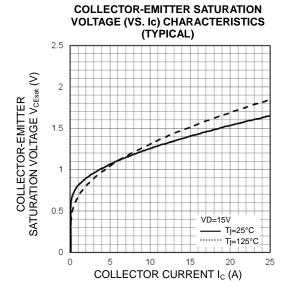

NOTES FOR STABLE AND SAFE OPERATION;

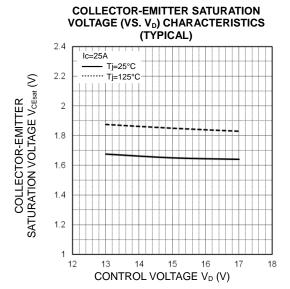

- Design the PCB pattern to minimize wiring length between opto-coupler and IPM's input terminal, and also to minimize the stray capacity between the input and output wirings of opto-coupler.
- Connect low impedance capacitor between the Vcc and GND terminal of each fast switching opto-coupler.
- Fast switching opto-couplers: t_{PLH}, t_{PHL} ≤ 0.8µs, Use High CMR type.
- Slow switching opto-coupler: CTR > 100%
- Use 4 isolated control power supplies (V_D). Also, care should be taken to minimize the instantaneous voltage charge of the power supply.
- Make inductance of DC bus line as small as possible, and minimize surge voltage using snubber capacitor between P and N terminal.

Keep safety first in your circuit designs!

Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.
